CareerCollective

Find your path. Track your progress. Grow together.

STUDENT AI APPLICATION | USER GUIDE / GUIDE D'UTILISATION

What is CareerCollective?

A bilingual (English/French) educational prototype that helps students find internships and apprenticeships, compare explainable recommendations, organize their applications, and exchange practical advice. France is the initial focus.

Getting started — English

01

Create your profile

Open My profile; set your career goal, interests, skills, city and contract preferences. Optionally upload a text-based PDF, DOCX or TXT CV. Click Save profile.

02

Discover relevant opportunities

Open Discover. Search or filter by sector, contract and source. Expand Why this match? to see shared skills and areas to develop. Demo posts are clearly marked FICTIONAL.

03

Import or add job listings

To fetch published jobs, enter a company-specific board identifier under Import current vacancies (Greenhouse or Lever). Or add a posting manually with a verified job URL. The APIs do not search all employers.

04

Track every application

Save a role, open My applications, and update its status, notes and published deadline. Import an existing Excel/CSV tracker or export a fresh file.

05

Use the community

Open Community to explore sample discussions, create a post or reply. These are session-only interactions, not a public multi-user chat.

06

Export before leaving

Download an Excel tracker or JSON session backup. There is no permanent database, and refreshing or disconnecting can reset your session.

Important: Match scores are suggestions based on text similarity and skills; they are not probabilities of being hired. Always confirm an opportunity and its dates on the original employer website.

Guide rapide — Français

Toutes les fonctions essentielles, en six étapes.

01

Renseigner votre profil

Dans Mon profil, indiquez vos objectifs, compétences, secteurs, ville et contrat recherché. Importez éventuellement un CV PDF texte, DOCX ou TXT.

02

Trouver des offres

Dans Découvrir, filtrez les résultats et consultez les raisons de chaque recommandation. Les offres du jeu de données initial sont fictives.

03

Ajouter les annonces

Importez des annonces publiques pour une entreprise Greenhouse ou Lever, en utilisant son identifiant de job board. Une saisie manuelle est aussi possible.

04

Suivre les candidatures

Dans Mes candidatures, modifiez le statut, les notes, les dates limites publiées et exportez votre tableau Excel ou CSV.

05

Échanger dans la communauté

Dans Communauté, créez une discussion et répondez à d’autres messages de démonstration. Les échanges ne sont pas visibles par d’autres utilisateurs.

06

Sauvegarder

Téléchargez votre fichier Excel ou une sauvegarde JSON avant de quitter la session : aucun stockage permanent n’est prévu pour cette version.

About the AI / À propos de l’IA

The full AI mode uses a pretrained multilingual Sentence Transformers model downloaded from Hugging Face to compare profile text with job descriptions. A documented scikit-learn TF-IDF fallback is available if the model cannot load. Both support explainable skill matching. The app does not predict hiring outcomes.

Privacy and job data / Confidentialité et annonces

Never upload sensitive personal CVs for a public class demo: use the included fictional example profile. No account, central database, push notifications, or automatic applications are implemented. Public Greenhouse/Lever feeds are employer-specific; a missing posting does not prove that the recruitment has closed.

For technical setup and deployment, see README.md in the project archive.
